

# ECORRCRATE

**ECO FRIENDLY CORRUGATED CRATE**

The ECORRCRATE is a patent pending product developed to meet the growing need for a crating solution that is eco friendly, easy to recycle, with the strength and durability of existing wood crating and most importantly cost effective. Let's face it, in today's economy we need solutions that **SAVE PEOPLE MONEY**. The ECORRCRATE meets all these qualifications and more!

**\*COST EFFECTIVE-** The ECORRCRATE will save you money in upfront costs AND in reduced shipping costs.

**\*STRONG-** The key to the strength of the ECORRCRATE is the ECORRBOARD, which is a patent pending product we use to make the ECORRCRATE. In lab tests it was able to meet or exceed the strength of most all traditional wood crates. All of our walls and the top are made with the ECORRBOARD.

**\*LIGHT-** The ECORRCRATE is typically less than 1/2 the weight of comparable wooden crate saving additional money on freight.

**\*COMPACT-** The ECORRCRATE can ship in a compact, knock down form, which offers our clients many additional benefits including reduced shipping costs and requiring less storage space.

**\*CUSTOMIZABLE-** The ECORRCRATE can be made in almost any size or configuration!

**\*RECYCLABLE-** The ECORRCRATE is 100% recyclable. Extensive research has been put into our product to make sure the most environmentally friendly materials are used in the manufacturing of the ECORRCRATE.

**\*WATER RESISTANT-** The ECORRCRATE utilizes the most recent technological advances in humidity protection in the form of a patented product called ClimaGuard that protects the internal portions of the ECORRBOARD against humidity and a water resistant patented coating called FiberShield that repels water on the exterior of the ECORRCRATE.

**\*DURABLE-** The ECORRCRATE patent pending technology has allowed us to create an ECORRBOARD that not only matches the strength of most wood alternatives but in most cases provides additional advantages.

**\*CONVENIENT-** The Knock Down ECORRCRATE can be assembled in a fraction of the time of a conventional crate, which saves money on labor. The end user can disassemble the crate by clipping the straps and just throwing it into the recycle bin.
